Art Unit: 1755

This action is in response to applicant's amendment of 12 October 2005. The amendments to the claims have overcome the previous rejections.

Claims 43-47 are objected to because of the following informalities: The leading zeros in the formulas are missing. In addition, the fact the percentages are weight percentages is missing. Appropriate correction is required.

Claims 43-47 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

The claimed compositions are not disclosed in the original disclosure. While example 1 teaches the precursor dopant mixture of claim 1, there is no indication that the resulting ceramic has the claimed formula. While examples 3-5 indicate the amount of Ni_2O_3 in the precursor powder mixture is 0.5 and 1 wt%, there is no indication of the percentages of excess PbO (the dopant amount) and MnO_2 or the formulas of the resulting ceramic. There is no disclosure in the original disclosure that the composition of claim 44 has any Q_m value above 1000. If this formula does correspond to example 3 or 4, as indicated by applicant in the response (applicant states the claimed formulas correspond to the compositions of table 1 which have a strain constant d_{33} over 300), then the Q_m is limited to 340 or 536.

Claims 43-47 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1755

Claims 45 and 46 are the claim and thus are duplicates. Applicant is advised that should claim 45 be found allowable, claim 46 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k). The wording of these claims is indefinite since it implies the final ceramic is doped with PbO, but the specification does not teach PbO as a dopant in the final ceramic, only as a dopant in the precursor mixture. In addition, it is unclear what is the amounts of MnO₂ and nickel oxide in the ceramic since the amounts are claimed in terms of the amount in the precursor mixture. Finally, the final form of the nickel oxide is unclear since Ni₂O₃ converts to Ni when heated above 600°C, and the specification teaches the ceramic is heated at 800-1000°C.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1755

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
